

BDI Helps a Retail Distribution Center Customer Cut Through the Clutter

PROBLEM ▼

The maintenance area at a national retailer's Ohio distribution center was messy and disorganized. Maintenance techs at the facility used the space for cutting chain, among other things. Various tools cluttered the space - including a hammer and punch, a grinding wheel, and a handheld breaking tool. None of these cutting methods was right for the job, however. There were personal safety concerns for the techs operating them, and chain was often destroyed before it was even installed. Clock time was also sacrificed as techs went looking for the smaller tools.

THE SOLUTION:

BDI suggested that the customer install a Drives Inc. EZ BREAKER, which mounts to a chain table and is always ready for use. EZ BREAKER employs a powerful cam action to push both pins through both plates simultaneously. This eliminates operator error that could bend the plates or pins, ultimately making chain installation difficult.

SUCCESS MADE EASIER:

While the cost of the EZ BREAKER was \$1,108.00 (including the three (3) dies needed), the installation has created significant goodwill and confidence in BDI as a solutions provider. Chain cutting has become safer, faster, and easier for the maintenance techs, and their workspace is organized and streamlined. The facility has since placed a number of bulk chain orders with BDI.

Contact your local BDI branch for more information on chain products and other BDI Solutions.
